About the event

Together with the **Green Economy Coalition**, the **Institute for European Environmental Policy (IEEP)** is organising this event on 10 June 2025 in Brussels to discuss the critical role of trade and investment partnerships in shaping sustainable and inclusive global solutions to the triple planetary crisis. This event will provide a deeper understanding of the external impacts of the EU's environmental policies on countries in the Global South, with a particular focus on the African continent. With EU and international stakeholders and policymakers contributing to the discussion, we will explore how to foster a more **cooperative and inclusive approach** to environmental policy-making and climate diplomacy. We will first present the results of two complementary surveys: the European Green Deal Barometer 2025, an expert survey identifying the spillovers of those Green Deal policies that have an external dimension, and the Global Green Attitudes poll, measuring citizens' support for green policy around the world.

We will then present the final report of a project focusing on how the EU can ensure coherence on its trade, investment and sustainability policies, focusing on the needs of developing countries, particularly the Global South, while mitigating any negative spillover effects. This event will promote actionable solutions by facilitating dialogue between EU

decision-makers and Global South representatives on how to better include the perspectives of countries outside the EU in the implementation process of EU environmental measures.

For more information about the event, please contact: Leah Zambra at lzambra@ieep.eu
